Installation Guide - GreaseShield®1000-FLF

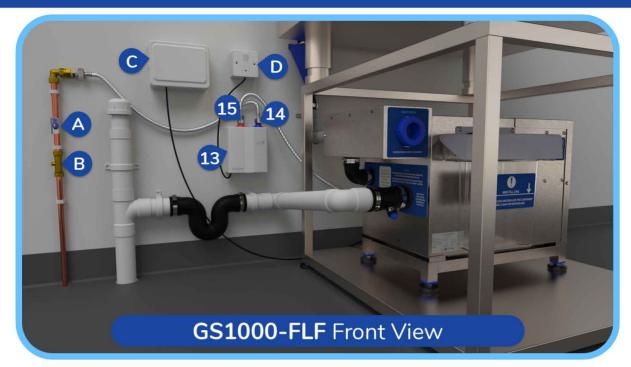

- **1 GS1000 Unit:** Ensure that there is sufficient clearance above and to the right of the unit for servicing purposes (5.9"/150mm minimum).
- Inlet Pipe 11/2"/40mm: To be piped with a sufficient fall of no less than 1 in 40.
- 3 Outlet Pipe 2"/50mm: To be piped with a sufficient fall of no less than 1 in 40.
- Front Loading Filter Inlet Filter: Ensure the removable filter is not restricted or blocked for daily maintenance.
- 6 Adaptor Bracket: To be fixed onto the top of the GS1000 unit so that the Front Loading Filter can be mounted.
- 6 Sampling Point: Connected to the outlet of the unit: it is essential in the analysis of effluent leaving the unit.
- Running Trap: The outlet of unit must be fitted with a running trap to reduce foul smells.
- 8 FOG Container: Ensure that the container is not restricted or blocked for daily maintenance.
- 9 Hot Water Solenoid Valve: Hot water must be connected to the unit using the 3/4" BSP (F/F) Red PVC Hose provided, water supply must not exceed 3 bar pressure and 60°C/140°F. In the case of high pressure a pressure reducing valve must be used. Mains water connections must be made via a WRAS approved isolation valve which follows a WRAS approved double check valve.
- 🚇 Power Lead: The unit must be plugged into a 13 amp rated IP56 socket located below counter level.
- Interconnecting Pipework: All pipework must be clipped and properly supported.
- Stainless Steel Hygiene Stand (Optional Extra): GS1000 unit should be installed on a Stainless Steel Hygiene Stand. It can be adjusted up to 2"/50mm in height to allow the unit to be levelled on uneven surfaces and provide access for cleaning.
- 13 Genie H2O (Optional Extra): Must be wired into a 240 Volt, 16Amp rated independent fused spur. The Genie H2O must have a power and and water supply at all times.
- Genie H2O Water Inlet (Blue): Water must be connected to the Genie H2O using the 3/4" to 1/2" stainless steel hose provided, water supply must not exceed 3 bar pressure. In the case of high pressure a reducing valve must be used.
- Genie H2O Water Outlet (Red): A ½" Flow Control Valve must be connected directly to the hot water outlet of the Genie H2O. The ¾" to ½" stainless steel hose provided is used to connect to the Hot Water Solenoid Valve.

When hot water is not available, a Genie H2O must be used.

Installation Guide - GreaseShield®1000-FLF

- Make sure the unit is installed on level ground or adjust the stand feet to ensure the unit is level.
- Have a hot water connection available to connect to the unit, if one is not available the unit must be equipped with a Genie H2O to give hot water on demand. Water connection must be made via a WRAS approved isolation valve A and double check valveB

- Have an IP56 rated socket C below counter level available to the unit to plug into. If a genie H2O is required ensure an additional power supply (preferably a fuse spur D is available.

 Ensure all pipe work into and out of the unit has at least a 1 in 40 fall (downwards angle of 1.5°).
- Clean the Inlet Filter and FOG container daily.
- An Air Admittance Valve Emust be installed after the running trap so a siphon doesn't occur.
- When installing the unit on an oven a tundish; or alternate air break or vent must be fitted to the inlet pipework, directly after the ovens outlet.

- Place the unit in passageways where it can be a hazard or be damaged.
 Open the unit or insert hands into any part of the unit; moving parts can cause injury.
- Stand or place heavy objects on top of the unit.
- DON'T Dismantle the unit in any way, only qualified service staff are to access the inside of the unit.
